

THE FREEDOM OF PRECISION

UC-CARE

Navigo

Welcome to the only real-time 3D fusion navigation system that automatically accounts for patient motion while allowing physician freedom-of-movement and comprehensive workflow integration.

fusionUNINTERRUPTED

Working in concert with any TRUS system, Navigo blends advanced diagnostics with the real-time electromagnetic tracking of ultrasound and patient. Physicians can quickly navigate and pinpoint regions of interest with precision, without interruption or delays.

SEAMLESSLY CONNECT WITH EXISTING TRUS SYSTEMS

Compatible with most commercially available ultrasounds, Navigo integrates into multiple work modalities without the need to change preferred system configurations or workflows.

WORK WITH, NOT AGAINST, PATIENT MOVEMENT

Patented technology makes Navigo the only fusion system capable of compensating for patient movement in real time, without delays or the need for manual repositioning.

PROCEED UNINTERRUPTED

From biopsy through treatment, Navigo automatically supports and complements your workflow, without buttons or pedals.

STEP 1: Preparation

- Plan for fusion by accurately identifying targets with Navigo Fusion Studio. Standalone version and PACS interface available.
- No fusion? No problem. Navigo's 3D navigation is compatible with most commercially available ultrasounds.
- Enjoy automatic prostate contouring and fusion assistance.
- Easily import and display historical biopsy data.

STEP 2: Biopsy Progression

- Eliminate the need to restart the procedure as Navigo automatically adjusts to ultrasound settings and patient movement in real time.
- Perform transperineal or transrectal biopsies with your transducer.
- Avoid buttons or pedals! Navigo automatically updates biopsy locations as you proceed.

STEP 3: Reviewing and Reporting

- Generate procedure reports
- Display 3D pathology results.
- Review biopsy and ROI locations.

UC-CARE

Our scenario-first technological approach results in end-to-end biopsy solutions that automatically adapt to physician, patient and technician clinical realities, ensuring a streamlined process from biopsy through diagnosis, treatment and patient monitoring.
